

# Mt A Computer Science Conference

Hello future hackers,

My name is Rija Ali, VP of External Affairs for Mt A Hacks 2019. I am pleased to invite you to our first annual hackathon on February 2nd, 2019 at Mount Allison University. We aim to build a computer science community across the Maritimes and provide an opportunity for high school and university students to learn new skills in IT, build groundbreaking projects, and pitch them to judges from companies including Google and Dell. A hackathon is a place to innovate and create, as opposed to the colloquial definition of hacking.

Our focus is on tech for environmental sustainability, and the conference features workshops, industry booths, and social events from 9 am to 10 pm. For more information regarding our agenda visit our website <http://mtahacks.ca/>.

Registration is now open to students of all experience levels and has no fee. To register for the event, sign up [here](#). We will not be providing transportation, but students travelling to the hackathon will be partially reimbursed after the conference. Registration is limited, so sign up early to reserve your place. You can also follow us on Facebook, Twitter, and Instagram to stay updated about the event. If you have any questions, feel free to email me at [outreach@mtahacks.ca](mailto:outreach@mtahacks.ca). I hope to see you on February 2nd, 2019!
