

## Plastics – PowerPoint Presentation

We have been learning about plastics, plastic pollution, Canada's single use plastics ban, effects of plastic production and pollution on the Earth (organisms and environment), new innovations related to reducing plastics, types of plastics and recycling, what happens when plastic is recycled and ways to reduce plastic usage. Now you will make a PowerPoint Presentation to demonstrate your understanding of the problem and help make a change.

**PowerPoint Requirements** – see PowerPoint Rubric

**Information for PowerPoint** – you will use all the information presented in class. **You do NOT need to do any research on the internet!**

You will use your:

- “Plastic Quest – the Search for Solutions” (article and question sheets)
- Long Information Collection Sheet (information you gathered from videos we watched in class)
- “Microplastics pollution mars province's rivers, new study reveals” Daily Gleaner article and question sheet.
- Cause and Effect sheet you completed
- Recycling Activity sheet you completed in class
- 10 tips to reduce your plastic use (list and 3 things you can do)
- Statistics Collection sheet you completed

**Pictures for PowerPoint** – see Inserting Pictures in your PowerPoint

**This is an “in-class” assignment.** You will be using the Library Computers, Tech Lab computers or iPads. If you would also like to work on this at home, you can; however, your information materials must be brought back to school each day in your page protector to use at school.

**Due Date:** **Monday, April 3<sup>rd</sup>**. Students can submit their assignment (through Teams) before the due date if completed.

**Parent/Guardian Signature:** \_\_\_\_\_
