Graphing Sine and Cosine Functions

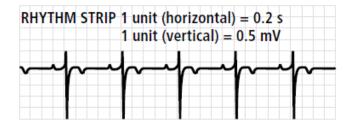

PERIODIC FUNCTION:

A function for which the dependent variable takes on the same set of values over and over again as the independent variable changes.

Examples:

An individual's height above the ground as a function of time as they ride the Ferris wheel.

Rebecca has a submersible pump in her basement that is situated such that it can remove water that collects below her foundation. There is a hole in the basement floor and the pump sits in the bottom of that hole. During a particularly heavy rain storm, the pump kept turning off and on at regular intervals as it attempted to drain the excess water below the foundation. The relationship between the depth of water in the hole and time is shown in the graph.

10-4 6 8 12 Time (min)

An ECG measures the electrical activity of a person's heart in millivolts over time.

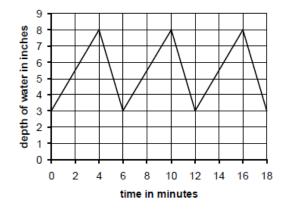

The automatic dishwasher in a school cafeteria runs

constantly through lunch. The graph shows the amount of water used as a function of time.

30

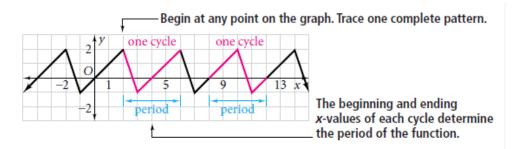

20

Height (m)

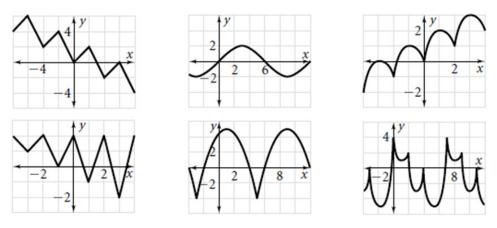

PERIOD:

The horizontal length of one cycle on the graph of a periodic function.

Each cycle is 4 units long. The period of the function is 4.

Determine whether each function shown is periodic or not.

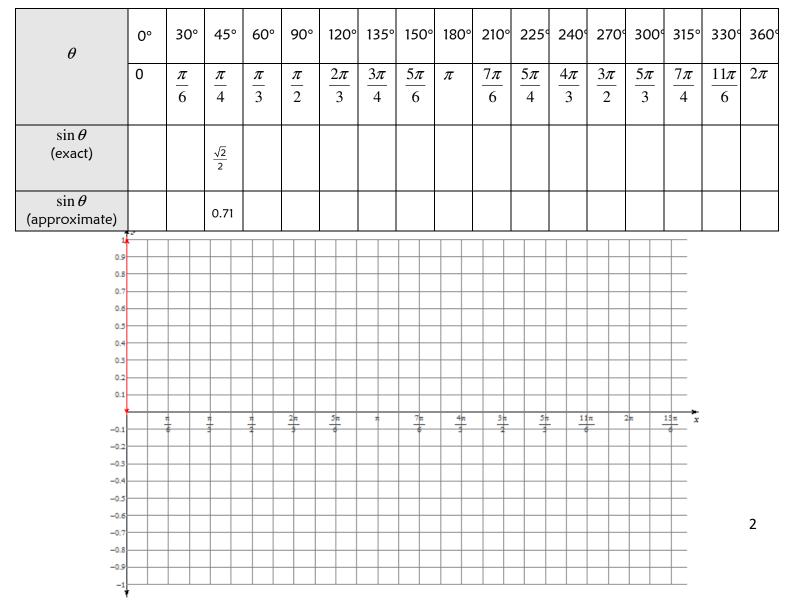

THE SINE FUNCTION

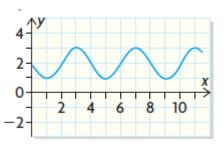

Sketch the graph of $y = \sin \theta$ for $0^{\circ} \le \theta \le 360^{\circ}$ or $0 \le \theta \le 2\pi$. Describe its characteristics.

Solution:

Complete the following table of values for $y = \sin \theta$. Plot the points and join them with a smooth curve.

A periodic function whose graph looks like smooth symmetrical waves, where any portion of the wave can be horizontally translated onto another portion of the curve.

EQUATION OF THE SINUSOIDAL AXIS:

The equation of the horizontal line halfway between the maximum and minimum.

AMPLITUDE:

The vertical distance from the function's axis to the maximum or minimum value.

Using your graph of $y = \sin \theta$, determine each of the following:

DOMAIN:	RANGE:	MAXIMUM VALUE: MINIMUM VALUE:	EQUATION OF THE SINUSOIDAL AXIS:		
AMPLITUDE:	PERIOD:	Y-INTERCEPT:	θ -INTERCEPTS :		

Determine the 5 key points that would enable you to draw the sine curve quickly.

θ (degrees)	θ (radians)	У
0°	0	
	π	
90°	$\frac{\pi}{2}$	
180°	π	
	3π	
270°	2	
360°	2π	

TRANSFORMATIONS OF THE SINE FUNCTION

Sketch the graphs of the following functions over the given intervals. Identify the amplitude, period, vertical translation, phase shift, domain, range, maximum and minimum values, and the equation of the sinusoidal axis.

a.
$$y = 2\sin(x - 45^\circ) + 3; x \in [-360^\circ, 360^\circ]$$

b.
$$y = -3\sin 2\left(\theta + \frac{\pi}{4}\right); \ \theta \in \left[-2\pi, 2\pi\right]$$

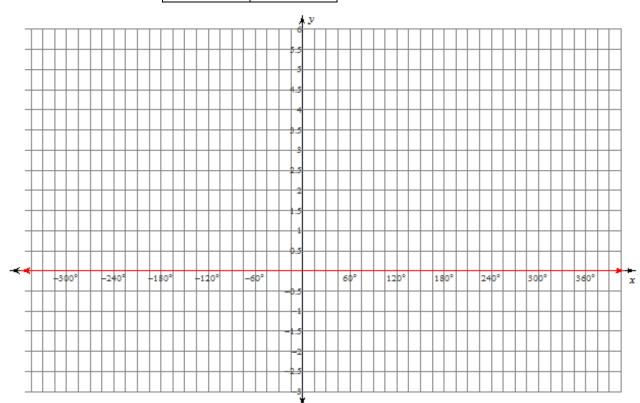

Solution:

a.
$$y = 2\sin(x - 45^\circ) + 3; x \in [-360^\circ, 360^\circ]$$

Mapping Rule: $(x, y) \rightarrow$

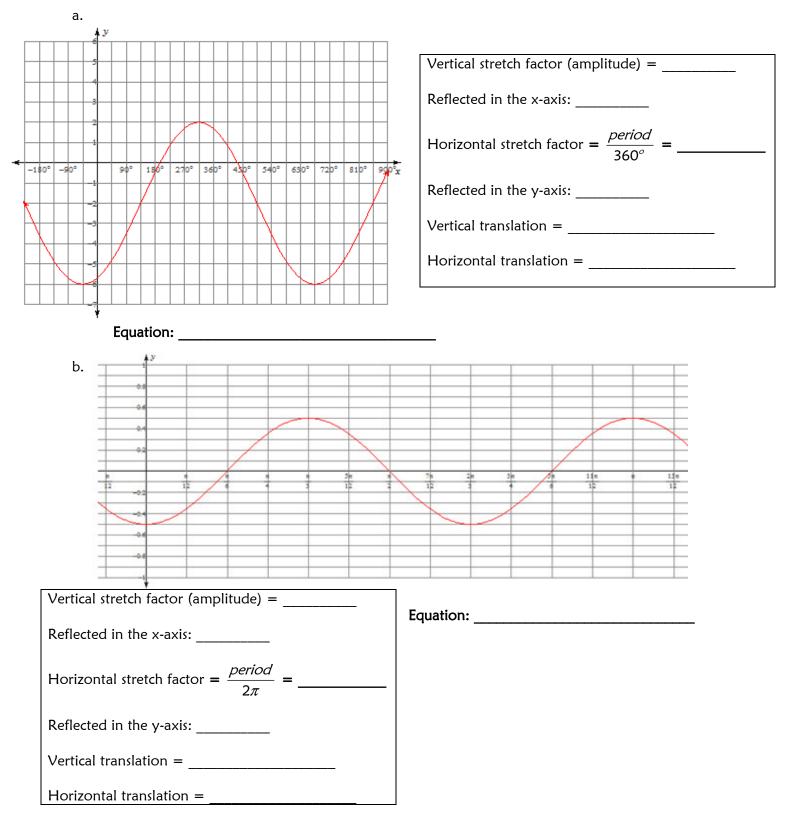

<i>y</i> = 1	sin x	$y = 2\sin(x - 45^\circ) + 3$

DETERMINE AN EQUATION FROM A GRAPH

Write an equation for each function illustrated below in the form $y = a \sin b(x - c) + d$.

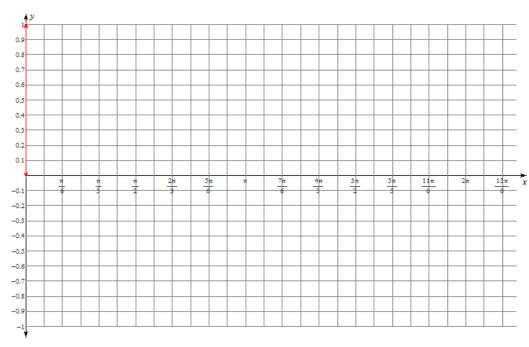

THE COSINE FUNCTION

Sketch the graph of $y = \cos \theta$ for $0^{\circ} \le \theta \le 360^{\circ}$ or $0 \le \theta \le 2\pi$. Describe its characteristics.

Solution:

Complete the following table of values. Plot the points and join them with a smooth curve.

θ	0°	30°	45°	60°	90°	120°	135°	150°	180°	210°	225°	240°	270°	300°	315°	330°	360°
	0	$\frac{\pi}{6}$	$\frac{\pi}{4}$	$\frac{\pi}{3}$	$\frac{\pi}{2}$	$\frac{2\pi}{3}$	$\frac{3\pi}{4}$	$\frac{5\pi}{6}$	π	$\frac{7\pi}{6}$	$\frac{5\pi}{4}$	$\frac{4\pi}{3}$	$\frac{3\pi}{2}$	$\frac{5\pi}{3}$	$\frac{7\pi}{4}$	$\frac{11\pi}{6}$	2π
cos θ (exact)			$\frac{\sqrt{2}}{2}$														
$\cos \theta$ (approximate)			0.71														

Determine the 5 key points that would enable you to draw the cosine curve quickly.

θ	θ	у

90°	$\frac{\pi}{2}$	
180°	π	
	3π	
270°	2	
360°	2π	

Using your graph of $y = \cos \theta$, determine each of the following:

DOMAIN:	RANGE:	MAXIMUM VALUE: MINIMUM VALUE:	EQUATION OF THE SINUSOIDAL AXIS:		
AMPLITUDE:	PERIOD:	Y-INTERCEPT:	θ -INTERCEPTS :		

TRANSFORMATIONS OF THE COSINE FUNCTION

Sketch the graph of the following functions over the given interval. Identify the amplitude, period, vertical translation, phase shift, domain, range, maximum and minimum values, and the equation of the sinusoidal axis.

a.
$$y = 3\cos\left(\frac{1}{4}(x+60^\circ)\right) + 1; x \in \left[-120^\circ, 1740^\circ\right]$$

b. $y = \frac{-1}{4}\cos\left(2\theta - \frac{\pi}{6}\right); \theta \in \left[\frac{-2\pi}{3}, \frac{11\pi}{6}\right]$

Solution:

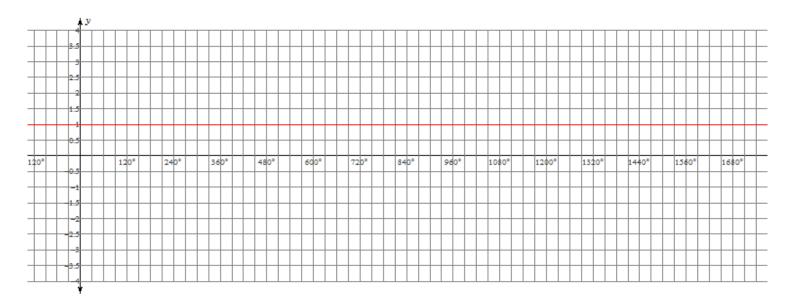

a.
$$y = 3\cos\left(\frac{1}{4}(x+60^\circ)\right) + 1; x \in [-120^\circ, 1740^\circ]$$

Mapping Rule: _____

y=cosx						
x	У					
0°

DETERMINE AN EQUATION FROM A GRAPH

Write an equation for the function illustrated below in the forms:

a. $y = a \cos b(x-c) + d$

b. $y = a \sin b(x-c) + d$

Vertical stretch factor = _____

Reflected in the x-axis: _____

Horizontal stretch factor =

- Vertical translation = _____
- Horizontal translation = _____

EQUATION: _____
